

Some references on Blockchain

Thank you to those of you who participated to our workshop on blockchain on Friday 22 June. You will find below the details of the Energy Cities report on the topic, together with additional references shared by Markos from Klenergy (and his comments).

Markos is open to questions! Please **send your questions** to Roland (roland.tual@rescoop.eu). Roland will compile them and send to Markos who will answer them in a format yet to be determined...

To go further on the blockchain topic...

- **Energy Cities**, 'Blockchains and Energy Transition, what challenges for cities?', 2018 ([link](#))
A great introductory report on the topic which includes the examples presented and a complementary reference list
- **PwC report** 'Blockchain – an opportunity for energy producers and consumers?', 2015, ([link](#)).
Not very recent but covers the basic. I think it is a good place to start to understand the basics and some first ideas of the potential applications in the energy sector.
- **Australian Govt report** 'Peer-to-Peer Distributed Ledger Technology Assessment', 2017, ([link](#)).
Getting a bit more advanced and very detailed analysis - from Australia.
- **Article from Bloomberg** 'How Blockchain Is Threatening to Kill the Traditional Utility', 2018, ([link](#))
Focusing more into the application aspects of blockchain, might also be a good way to start (or have a break from the headache that the other sources have caused!).
- **Pylon Network's White Paper** ([link](#))
For more info about the project and all its aspects - just bear in mind that an updated version will be coming soon which will reflect better what we see as Pylon Network and how we see it operating in the energy market. (Project website [link](#))
